RESQ

Pitch Deck Content: TiE University

Slide-by-slide guide: what to show, what to say, what to prove, and what investors will ask.

> ***One-line pitch:*** *India has no accessible mobility solution for pets, so injured and paralysed animals are euthanized or neglected. RESQ gives a free wheelchair and a Rs. 3,999 subscription that bundles affordable healthcare, so owners spend about half of what they do today.*

DECK FLOW AT A GLANCE

#	Slide	Job of the slide
1	The Opening: Stigma	Stigma is curable: diabetes and insulin, mobility and rehab
2	The Problem & the Gap	Humans have access; dogs, even service dogs, don't
3	Evidence	Prove the demand is real
4	The Solution	Show what RESQ is
5	Value Proposition	Make the price difference obvious
6	Business Model	Show why it makes money
7	Go-to-Market & Ask	Close with growth plan and the ask

Story arc: Stigma and hope, the gap for dogs (including service dogs), proof it is real, our answer, why customers say yes, why we make money, how we grow and what we need. Each slide answers the question the previous one created.

Design: navy, orange, white. One idea per slide. Slides 1-2 are the opening and carry the emotion (photos, contrast); slides 5-6 rational (numbers, flow charts).

Items in [brackets] are placeholders. Do not present them as facts until you have a verified figure.

SLIDE 1 | THE OPENING: STIGMA

Mobility loss carries a stigma. Rehab support is what breaks it, for people and for dogs.

Goal: Open with an emotion and an idea the room already understands: stigma, and how support breaks it.

WHAT TO SHOW ON THE SLIDE

- Split visual with two panels: **Diabetes:** stigma, then insulin, then normal life. **Mobility loss:** stigma, then rehab support, then normal life.
- One strong image of someone thriving after mobility loss (Paralympic or wheelchair-tennis athlete).
- One line at the bottom: "The stigma is curable."

WHAT TO SAY: TALKING POINTS

- *“Diabetes once carried a heavy stigma. Insulin changed that.”*
- *“Mobility loss carries the same stigma today: people hear 'paralysed' and assume the story is over.”*
- *“Rehab support breaks that stigma. The stigma is curable.”*
- *“That is true for people, and it should be true for animals. This is where RESQ starts.”*

FULL SCRIPT (about 30-40 seconds, spoken)

Not long ago, diabetes carried a heavy stigma. Insulin changed that. It became a condition people manage and live full lives with. Mobility loss carries the same stigma today. Someone is told they can't walk, and people assume the story is over. It isn't. Rehab support breaks that stigma, the way insulin did for diabetes. We see people walk, play and compete again. That is true for people. It should be true for animals too, and that is where RESQ starts.

PROOF TO HAVE READY

- A credible source for the diabetes stigma and how insulin changed it (insulin was first used in treatment in 1921) [verify and cite].
- One or two outcome facts on rehab for mobility loss in humans [source].
- One real photo of a person who recovered or competes after mobility loss, with permission or a licensed image.

QUESTIONS INVESTORS WILL ASK

- Why compare mobility loss to diabetes?
- Is mobility loss really curable?

Tip: Say "the stigma is curable", not "the injury is curable". Be precise: rehab restores quality of life and movement, and you should never overpromise recovery.

SLIDE 2 | THE PROBLEM & THE GAP

Humans have a mobility solution market. Dogs do not. That gap is RESQ.

Goal: Show that humans have an accessible mobility system and dogs, including service dogs, have nothing comparable.

WHAT TO SHOW ON THE SLIDE

- Left side, **Humans:** famous examples of adaptation (Paralympic Games, Wimbledon wheelchair tennis), prosthetics, rehab, insurance.
- Right side, **Dogs:** two photo strips. First, happy dogs walking in wheelchairs, proof the solution works. Second, service dogs (bomb-detection, police, military) that lost legs.
- One tasteful image of a dog abandoned or euthanized because owners and NGOs cannot afford care, plus the big number: [X] disabled dogs per year in India [source].
- Comparison table (below), then the headline.

	Humans	Dogs
Famous examples	Paralympics, Wimbledon wheelchair tennis	Few or none; bomb-squad dogs get no standard support
Wheelchairs and prosthetics	Yes	No affordable wheelchair
Physiotherapy / rehab network	Yes	No rehab network
Insurance	Yes	No insurance
Outcome after severe injury	Care and recovery	Often euthanasia

WHAT TO SAY: TALKING POINTS

- *"Look at the human side: Paralympians, Wimbledon wheelchair champions, a whole industry, role models, funding and insurance."*
- *"Now look at dogs: a dog that loses its legs gets no wheelchair, no rehab and no insurance, and often faces euthanasia."*
- *"But the solution works: dogs in wheelchairs run, play and live happy lives, and working dogs like bomb-squad dogs deserve the same chance."*
- *"We are not inventing a new market. We are bringing an existing, proven market to the species that has none."*

FULL SCRIPT (about 30-40 seconds, spoken)

Look at the human side: Paralympians, Wimbledon wheelchair champions, a whole industry, role models, funding and insurance. Now look at dogs. A dog that loses its legs gets no wheelchair, no rehab and no insurance, and it often means euthanasia. But the solution works: dogs in wheelchairs run, play and live happy lives. And this is not only about pets. Bomb-squad and other working dogs have lost legs in the line of duty, and they deserve the same chance. We are not inventing a new market. We are bringing a proven one to the species that has none.

PROOF TO HAVE READY

- 2 or 3 human adaptation examples with sources (Paralympic Games, Wimbledon wheelchair tennis).
- Photos or videos of dogs walking happily with wheelchairs (own or licensed).
- One real working-dog case: a bomb-detection, police or military dog that lost a leg [add name, source and photo; verify before using].
- Number of injured or disabled dogs per year in India [source]; size of the human mobility-aid market [source].

QUESTIONS INVESTORS WILL ASK

- Is there any competitor selling pet wheelchairs?
- Why would owners pay for a dog when they cannot afford it for themselves?
- Are service dogs a real customer segment? (Possible institutional buyers: police, army and K9 units [validate].)

Tip: Keep it visual. Lead with the contrast: humans on one side, dogs on the other. The working-dog example widens RESQ from pet owners to institutions.

SLIDE 3 | EVIDENCE

India is the largest growing market with no accessible mobility solution, and NGOs already prove it.

Goal: Move from emotion to proof: the demand is real.

WHAT TO SHOW ON THE SLIDE

- 2-3 research citations (title, journal, year) with one finding each on mobility aids and rehab outcomes for dogs.
- NGO proof: logos or quotes, plus what they pay today for imported or custom wheelchairs.
- Simple price chart: current cost of a pet wheelchair or care vs RESQ.
- Photos or short clips of dogs walking happily in wheelchairs, including a service dog if you have one.
- Up to 3 callouts, e.g. "Most owners give up because of cost, not love."
- India pet-care market size and growth rate [source].

WHAT TO SAY: TALKING POINTS

- *“Research shows that dogs with mobility aids and rehab can live long, happy lives.”*
- *“The NGOs we spoke to confirmed it: they turn animals away because they cannot afford a solution.”*
- *“India has one of the largest pet and street-animal populations and the fastest-growing pet-care market, yet no accessible mobility solution.”*

FULL SCRIPT (about 30-40 seconds, spoken)

> *Research shows dogs with mobility aids and rehab can live long, happy lives. The NGOs we spoke to confirmed it: they turn animals away because they cannot afford a solution. India has one of the largest pet and street-animal populations and a fast-growing pet-care market, yet no accessible mobility solution. We surveyed [N] owners and [X]% said they would use a wheelchair.*

PROOF TO HAVE READY

- At least 2 peer-reviewed or credible papers on canine mobility aids and rehabilitation.
- Written or recorded feedback from 3-5 NGOs or rescue centres, with current prices.
- Pet-owner survey: how many would use a wheelchair and what they spend now.

QUESTIONS INVESTORS WILL ASK

- Is this data primary or secondary?
- How many NGOs have committed to use it?

Tip: Even a 50-owner survey you ran yourself is strong evidence. Say how many people you asked.

SLIDE 4 | THE SOLUTION

One platform: free wheelchair, affordable care, and continuous rehabilitation.

Goal: Show clearly what RESQ is and does, in one picture.

WHAT TO SHOW ON THE SLIDE

- Wheelchair photo or render, plus 2-3 app screens.
- User flow: Wheelchair, Quick vet appointment, Specialist match, Continuous rehab, Grooming and wellness.
- Group every feature under three headings (table below).

Mobility	Care	Wellness
Free, patented wheelchair	Cheap, quick appointments; specialist matching; affordable treatment; continuous rehab	Spa, grooming, laser therapy

WHAT TO SAY: TALKING POINTS

- *"RESQ gives every disabled pet a wheelchair, and then stays with the owner through recovery."*
- *"We help owners find the right specialist, get a quick and affordable appointment, and keep up rehab so the dog actually recovers."*
- *"Beyond rehab, we offer spa, grooming and laser therapy, so RESQ becomes the one place for a pet's health and wellbeing."*

FULL SCRIPT (about 30-40 seconds, spoken)

> *RESQ gives every disabled pet a wheelchair, then stays with the owner through recovery. We help owners find the right specialist, get a quick and affordable appointment, and keep up rehab so the dog actually recovers. Beyond rehab, we offer spa, grooming and laser therapy, so RESQ becomes the one place for a pet's health and wellbeing.*

PROOF TO HAVE READY

- Wheelchair specs: materials, sizes, adjustability, weight, production cost per unit.
- Patent details and status.
- List of vets and specialists onboarded or committed.
- MVP screenshots or a short demo video.

QUESTIONS INVESTORS WILL ASK

- Who manufactures the wheelchair and at what cost?
- How do you guarantee vet quality?

Tip: Do not list every feature. Three headings only: Mobility, Care, Wellness.

SLIDE 5 | VALUE PROPOSITION

Owners spend about Rs. 8 to 8.5K on pet healthcare. With RESQ they spend Rs. 3,999 and get the wheelchair too.

Goal: Make the customer's saving obvious in one glance.

WHAT TO SHOW ON THE SLIDE

- Big bar comparison: Rs. 8-8.5K (typical spend) vs Rs. 3,999 (RESQ), labelled "about 50% less".
- What Rs. 3,999 includes: supplements, healthcare access, appointments, and the wheelchair (free).
- Small unit-economics box: revenue per subscriber, cost to serve, gross margin [fill with real numbers].
- **State the billing period clearly** (monthly, quarterly or yearly).

WHAT TO SAY: TALKING POINTS

- *"Today an average owner spends Rs. 8,000 to Rs. 8,500 on healthcare for a pet."*
- *"With RESQ, they spend Rs. 3,999, and that already includes supplements and the wheelchair."*
- *"The wheelchair is free. They pay for the subscription, not the device."*

FULL SCRIPT (about 30-40 seconds, spoken)

> *Today an average owner spends Rs. 8,000 to 8,500 on healthcare for a pet. With RESQ they spend Rs. 3,999, and that already includes supplements and the wheelchair. The wheelchair is free. They pay for the subscription, not the device.*

PROOF TO HAVE READY

- Source for the Rs. 8-8.5K figure (owner survey, vet data or market report).
- Breakdown of Rs. 3,999: supplements, appointments, platform fee, margin.
- Cost to serve one subscriber per month and per year.
- Expected retention (months an owner stays).

QUESTIONS INVESTORS WILL ASK

- Do you make money at Rs. 3,999, and where does the margin come from?
- Is Rs. 3,999 monthly, quarterly or yearly?

Tip: Investors will ask about the billing period immediately. Put it on the slide.

SLIDE 6 | BUSINESS MODEL

Free wheelchair, recurring subscription, and low costs through bulk buying and partnerships.

Goal: Explain how RESQ earns and why prices can stay low.

WHAT TO SHOW ON THE SLIDE

- Flow: Crowdfunding, Free wheelchair, Owner joins, Subscription revenue, Partner services.
- Three revenue/cost boxes: Subscription | Partner commissions (food, grooming, vets) | Bulk pharma and supplement margins.
- Partner logos: vets, Pawful (household meals), a grooming company.
- Badge: "Wheelchair patent owned by RESQ".

WHAT TO SAY: TALKING POINTS

- *“The wheelchair is crowdfunded and free. RESQ owns the patent, so nobody can copy it cheaply.”*
- *“We keep prices low because we buy from pharmaceutical companies at fixed rates and agree fixed fees for doctor appointments.”*
- *“Home food delivery for humans is already a proven model. We bring the same to dogs and collaborate with companies in that space, plus grooming companies.”*

FULL SCRIPT (about 30-40 seconds, spoken)

> *The wheelchair is crowdfunded and free. RESQ owns the patent, so it can't be copied cheaply. We keep prices low because we buy from pharmaceutical companies at fixed rates and agree fixed fees for doctor appointments. Home food delivery for humans is a proven model. We bring the same to dogs with partners like Pawful, plus grooming companies.*

PROOF TO HAVE READY

- Crowdfunding plan: platform, target amount, number of wheelchairs funded.
- Signed or verbal commitments from pharma suppliers, vets, Pawful and grooming partners.
- Cost per wheelchair vs wheelchairs funded per round.
- Patent number or filing proof.

QUESTIONS INVESTORS WILL ASK

- What if crowdfunding dries up?
- Why will partners give you fixed rates?
- What stops a bigger player from copying you?

Tip: Three real logos are stronger than a paragraph.

SLIDE 7 | GO-TO-MARKET & THE ASK

A free wheelchair is our marketing. We get customers through publicity, NGOs and pet communities.

Goal: Show how you will grow cheaply and close with a clear request.

WHAT TO SHOW ON THE SLIDE

- Strategy: wheelchair free first, subscription after.
- Channels: publicity from free wheelchairs, NGO initiatives, pet communities.
- MVP status and 6-12 month milestones.
- TAM / SAM / SOM concentric circles [fill with numbers].
- The ask: Rs. [X] crore with a use-of-funds pie chart.

WHAT TO SAY: TALKING POINTS

- *“Every free wheelchair is a story people share, so our customer acquisition cost is close to zero.”*
- *“NGOs and pet communities already run initiatives, and we plug into them.”*
- *“We are raising Rs. [X] crore to scale the MVP, produce more wheelchairs and onboard vets.”*

FULL SCRIPT (about 30-40 seconds, spoken)

> *Every free wheelchair is a story people share, so our paid customer acquisition cost is near zero, driven by referrals. The wheelchair's cost is covered by crowdfunding, not our balance sheet. NGOs and pet communities already run initiatives, and we plug into them. We are raising Rs. [X] crore to scale the MVP, produce more wheelchairs and onboard vets.*

PROOF TO HAVE READY

- TAM, SAM, SOM with sources and assumptions.
- A realistic CAC estimate.
- MVP milestones for the next 6-12 months.
- Use-of-funds breakdown.

QUESTIONS INVESTORS WILL ASK

- Is CAC really zero?
- What will you do with the money in the first 12 months?
- Which milestones unlock the next round?

Tip: Say "near-zero CAC driven by referrals", never "zero". It is more believable.

SUPPORTING MATERIAL

Market Size: TAM, SAM, SOM

Use a bottom-up structure: customers x price is more credible than a percentage of a huge market.

Layer	Definition for RESQ	How to calculate	Number
TAM	All pet owners and animal organisations in India with a pet needing mobility or healthcare support	Total pets in India x share needing care x annual spend	[fill]
SAM	Urban pet owners, NGOs and rescue centres in your launch cities	Pets in launch cities x share with mobility or chronic-care needs x Rs. 3,999	[fill]
SOM	What you can realistically win in 1-3 years	Target subscribers in year 1, 2, 3 x Rs. 3,999	[fill]

Customer Acquisition Cost (CAC)

- **Formula:** CAC = total sales and marketing spend / new paying customers in the same period.
- **Claim:** free wheelchairs create publicity and referrals via NGOs and pet communities, so paid marketing is minimal.
- **Honest nuance:** the free wheelchair is still a cost per customer. Show that crowdfunding covers it so it does not hit RESQ's balance sheet.
- **How to say it:** "Paid CAC is near zero. Effective CAC is the wheelchair cost, covered by crowdfunding."
- **Also show:** payback period = CAC / monthly margin per subscriber; lifetime value = monthly margin x months retained.

The Ask: Use of Funds

Decide first: your notes say 10 Cr in one place and 20 Cr in another. Use one number everywhere, and keep the split consistent with it. Percentages below are yours to set.

Category	What it covers	Share
Product & manufacturing	Wheelchair production, design iterations, patents	[ ]%
Technology	App, vet booking, subscription and rehab-tracking features	[ ]%
Partnerships & supply	Pharma and supplement stock, vet and grooming onboarding	[ ]%
Team & operations	Hiring, field operations, customer support	[ ]%
Community & NGO programs	NGO initiatives, events, pet-community outreach	[ ]%
Reserve	Runway buffer	[ ]%

BEFORE TOMORROW

Final Checklist

Task	Why it matters
Pick 10 Cr or 20 Cr and use it everywhere	Consistency across the deck
Decide if Rs. 3,999 is monthly, quarterly or yearly	Investors ask this first
Fill TAM / SAM / SOM	Required for the market slide
Estimate CAC and unit economics	Answers the toughest investor question
Collect research papers and NGO prices (slide 3)	Credibility and proof of demand
Replace every [bracket] with a verified figure	Never present placeholders as facts
Rehearse answers: margin at Rs. 3,999? crowdfunding dries up? bigger player copies you?	These are the likely tough questions
